

Community Programming Achievements In 2020, the Alliance nearly doubled the number of people reached through our community work, and continued to deepen our impact on peoples' lives in ways that help them better cope with both flood risk and the COVID-19 pandemic. This will increase in the coming years with the expansion of our community work in 2021 to an additional 11 countries, the extension of the program through the end of 2024, and the growing impact of our advocacy and policy work.

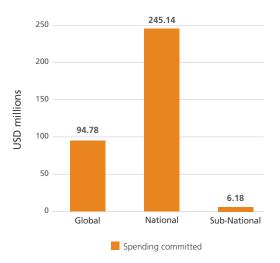

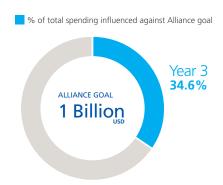

Advocacy Achievements

Although COVID-19 shifted policy priorities, we continue to advocate for addressing the resilience needs of the most vulnerable. Our strong relationships with policymakers and our willingness to meet their needs and provide tailored knowledge have been key to our success. We also influenced over USD 340 million in commitments and spending towards flood resilience as of December 1, 2020, a 53% increase from June of 2020.

Spending influenced to date in Phase II of the Alliance

The Alliance is advocating for an additional US \$1 billion from public and private sources towards climate-smart, risk-informed development. In reporting on spending influenced, we report total, unweighted amounts. However, in evaluating our achievements against our goal of 1 billion USD, we weight total commitments by the estimated Alliance role in influencing that spending.

## **United Kingdom**

Influenced allocation of UK's GBP 5.2 billion commitment toward local-level flood and coastal resilience financing

#### Indonesia

Influenced a stronger resilience focus in the National Action Plan on Adaptation and Pekalongon City's Spatial Plan

### Costa Rica Honduras

Created and mobilized 'first-of-their-kind' advocacy coalitions involving government, NGOs, and CSOs

# Global

Influenced a 19% increase in Green Climate Fund allocation of adaptation funds towards the most vulnerable countries

# Nepal

Facilitated inclusion of a clause in Sudurpaschim province disaster management policy to allocate 5% of the annual budget to disaster risk reduction activities (7 million USD for 2020-2021)

# Global

Increased uptake of Alliance messaging around 'green' COVID-19 recovery packages, 'Loss and Damage' resilience, and transformation in global and national policy dialogues

### **New Zealand**

Integrated indigenous voices in disaster and climate governance

### Peru

Influenced national government commitment towards nature-based solutions for flood resilience
